
Renewable energy – Real Experience Review

Few years back, in the same conference, my speech was entitled as Renewable Energy between Vision and Reality. Since that time, the technology development all over the globe has certainly caused the change in the title into renewable energy as a reality and the vision has been implemented in most of the cases. Based on the quality and quantity of utilizing alternative resources such as solar and biomass including the rapid developments of energy storage techniques, the real experience must be presented in the events related to energy and environment. Therefore, my new speech at EIEE 2020 is tackling the situation in Japan, Middle East and some other parts of the mother earth. Both technical and practical aspects will be touched upon and discussed with the audiences. Nevertheless, education in this regard to be mentioned as an important part of sustaining renewable energy distribution and utilization. It worths mentioning the dramatic changes occurred in electricity markets deregulation due to Covid 19 breakdown and its effect on the renewable energy sectors.
